USING OF PUBLISHER ENVIRONMENT IN TEACHER'S EDUCATIONAL ACTIVITY

Microsoft Office Publisher - is a program which helps to create, design and publish high-quality documents. It gives the opportunities to prepare brochures for printing, forms for sending by email or publishing on the web. Due to the supporting tools (various masters and panels) all materials created in Microsoft Office Publisher will have a professional view. Microsoft Office Publisher contains a variety of templates sorted by categories. So it is possible to create publications and other documents which can be used by teacher in educational activity.

Microsoft Publisher program helps to create typical publication on the base of blank templates: newspapers, brochures, calendars, catalogs, envelopes, business cards, invitations, greeting letters, menus, resumes and also websites. Thus, teacher can prepare interesting tasks, various instructional materials and use the program in different areas of learning process. Also, using of Publisher environment allows teacher to create useful visual aids intended for printing such as variants of individual tests, cards with assignments, puzzles, announcements, forms etc.

We have created publication on "Chemical element" which can be used by teacher while such school activities as brain-ring, funny, intellectual competition, etc.

Thus, Publisher environment is helpful for teachers, as it gives the opportunities for all-round knowledge using while educational activity.
