## **SELECTIVE EXTRACTION OF CATIONS $\text{Ag}^+$ , $\text{Au}^{3+}$ , $\text{Cu}^{2+}$ FROM AQUEOUS SOLUTIONS THE SURFACE OF THE COMPOSITE $\text{Fe}_3\text{O}_4/\text{SiO}_2$**

The aim of this work is the study of selective extraction of cations  $\text{Ag}^+$ ,  $\text{Au}^{3+}$ ,  $\text{Cu}^{2+}$  from aqueous solutions the surface of the composite based on  $\text{Fe}_3\text{O}_4/\text{SiO}_2$

In the course of the study for creating a favorable pH environment used acetate-ammonium buffer solutions[1]. Adsorption capacity ( A, mg/g), the distribution rate (E, ml/g) and the degree of extraction (R,%) were determined by usage of atomic absorption method [2].

In the study of selective extraction of the cation  $\text{Ag}^+$  paired with  $\text{Cu}^{2+}$  at pH=6 it was found that the concentrations of the second cation does not affect the adsorption in aqueous solutions the surface of the composite  $\text{Fe}_3\text{O}_4/\text{SiO}_2$  (Table.1).

Table 1

Adsorption of  $\text{Ag}^+$  in the joint presence of  $\text{Cu}^{2+}$  surface of  $\text{Fe}_3\text{O}_4/\text{SiO}_2$

$\text{C}_{\text{o}},$ $\text{Ag}^+ \text{mg/l}$	$\text{C}_{\text{Ag}^+} : \text{C}_{\text{Cu}^{2+}}$	A,mg/g	E,ml/g	R%	pH
1,55	1:0	0,219	892	84,26	6
1,67	1:0,05	0,233	835	83,37	6
1,73	1:0,3	0,245	916	84,62	6
1,57	1:1	0,221	901	84,39	6
1,91	1:2,5	0,267	858	83,74	6

The degree of extraction of  $\text{Cu}^{2+}$  ions companied by the concentration of ions  $\text{Ag}^+$  decreases and exerts a competitive influence ( pH = 8). However, when the concentration of ions  $\text{Au}^{3+}$  extraction degree of  $\text{Cu}^{2+}$  ions increases, it indicates the joint adsorption of the studied cations( pH = 8,5) (Table. 2).

Table 2

Adsorption of  $\text{Cu}^{2+}$  in the joint presence of  $\text{Ag}^+$ ,  $\text{Au}^{3+}$  surface of  $\text{Fe}_3\text{O}_4/\text{SiO}_2$

$\text{C}_{\text{o}},$ $\text{Cu}^{2+} \text{mg/l}$	$\text{C}_{\text{Cu}^{2+}} : \text{C}_{\text{Ag}^+}$	A,mg/g	E,ml/g	R%	pH
--	--	--------	--------	----	----

5,48	1:0	0,47	181	52,06	8
5,45	1:0,02	0,39	142	46,04	8
5,27	1:0,1	0,39	135	44,77	8
5,39	1:0,2	0,34	108	39,35	8
5,81	1:1	0,38	106	38,79	8
C <sub>o</sub> , Cu <sup>2+</sup> ,mg/l	C <sub>Cu</sub> <sup>2+</sup> : C <sub>Au</sub> <sup>3+</sup>	A,mg/g	E,ml/g	R%	pH
5,040	1:0	0,63	487	74,50	8,5
4,984	1:0,02	0,64	577	77,59	8,5
4,871	1:0,1	0,70	1052	86,33	8,5
5,363	1:0,2	0,74	800	82,75	8,5
5,374	1:0,5	0,71	647	79,51	8,5

Analyzed the data shows that with increasing concentration of Cu<sup>2+</sup> ions the degree of extraction of ions of Au<sup>3+</sup> increases. This proves the joint adsorption of cations in aqueous solution at pH = 8.5 on the surfaces of composites of Fe<sub>3</sub>O<sub>4</sub>/SiO<sub>2</sub>.

Table 3

Adsorption of Au<sup>3+</sup> in the joint presence of Cu<sup>2+</sup> surface of Fe<sub>3</sub>O<sub>4</sub>/ SiO<sub>2</sub>

C <sub>o</sub> , Au <sup>3+</sup> , mg/l	C <sub>Au</sub> <sup>3+</sup> : C <sub>Cu</sub> <sup>2+</sup>	A,mg/g	E,ml/g	R%	pH
5,046	1:0	0,458	199	54,46	8,5
5,788	1:0,02	0,563	233	58,33	8,5
5,758	1:0,1	0,904	2681	94,15	8,5
6,140	1:0,2	0,851	822	83,14	8,5
6,075	1:0,5	0,631	276	62,35	8,5
